

Threshold Overview Table

This table summarizes how much time your plant’s moisture levels spent in each threshold range—Too Low, Optimal, and Too High—within the selected time period.

Each row shows:

- The total duration spent in that range (e.g., 16h, 3d, etc.)
- The moisture range associated with that threshold (e.g., 12–32%)

This helps understand if The plant is staying within its ideal range or if adjustments are needed.

Day				Week				Month			
Too High	•	3 h	>80 %	Too High	•	1 d	>80 %	Too High	•	6 d	>80 %
High	•	23 h	68-79 %	High	•	1 d	68-79 %	High	•	5 d	68-79 %
Optimal	•	35 h	27-67 %	Optimal	•	3 d	27-67 %	Optimal	•	4 d	27-67 %
Low	•	12 h	19-26 %	Low	•	2 d	19-26 %	Low	•	1 d	19-26 %
Too Low	•	0 h	<18 %	Too Low	•	0 d	<18 %	Too Low	•	8 d	<18 %

Visual Indicator

The bar illustrates the distribution of moisture levels over the selected time window. Its total length (60px) is proportionally divided based on how much time the moisture level spent in each threshold range (e.g., Too Low, Optimal, Too High) during the displayed period.

Threshold Change Indicator

The thresholds have been updated during the selected period, the Threshold Change row will show how many times they were changed and list the respective dates. This helps track whether any shifts in the data are due to adjustments in your plant's care settings rather than environmental changes.

Multiple Threshold Changes same month				Multiple Threshold Changes different month			
Too High	•	6 d	>80 %	Too High	•	6 d	>80 %
High	•	5 d	68-79 %	High	•	5 d	68-79 %
Optimal	•	4 d	27-67 %	Optimal	•	4 d	27-67 %
Low	•	1 d	19-26 %	Low	•	1 d	19-26 %
Too Low	•	8 d	<18 %	Too Low	•	8 d	<18 %
Threshold change ▾		2	3, 4 Jul	Threshold change ▾		3	3, 4 Dec; 5 Nov

Parameter info Toast:

The Info toasts are displayed below the Data Charts to provide Information about the Parameter measurements. They will disappear after 24 hours of Data are completed. For Nutrition the Toast will disappear as soon as the User has provided the information for the data vis to be calculated

“Learn More” Button leads user to the respective info screen.

About Nutrition & Growth

We use multiple data points to predict your plant's nutrient needs. These predictions update automatically as conditions change.

Learn more >

About Volumetric Water Content

Volumeric Water Content shows how much water your plant's roots can access, taking the guesswork out of when to water next.

Learn more >

About Temperature

Temperature tracks the plant's environment, with stable ranges being key —brief exposure to extreme cold or heat can cause stress and harm your plant.

Learn more >

About Light

We track both the total amount of light your plant gets each day (DLI) and how intense the light is at any moment (PAR).
